

The background is a dark blue gradient. In the upper right, there is a glowing blue circular interface with the letters 'AI' in the center. Below this, a robotic hand is visible, reaching upwards. The overall aesthetic is futuristic and tech-oriented.

AI

A 10-slide guide

Using AI at work? Read this before you paste anything.

Free vs paid accounts, what counts as sensitive, why AI makes things up, and who owns what it writes.

Why it matters

27%

of Europeans already use AI for work.

91%

of them say it helps them finish tasks faster.

The question isn't whether people will use it at work. It's how to use it without leaking what they shouldn't.

Source: European Commission, Spring 2026 Economic Forecast. Survey of 21,207 people in 18 EU countries and 4 candidate countries, February to March 2026.

Free, paid and business accounts are not the same deal

	Free	Paid personal	Business
Trains the model on what you type?	On by default	On by default	Off by default
Who can see it	The provider	The provider	Your company
Deleted on request	Rarely	Sometimes	Yes, configurable

A paid plan buys you a better tool. It doesn't buy you privacy.

With business accounts, provider access is limited by contract. Policies differ by provider and change often, so check the tool's own data controls.

What counts as sensitive

Client & personal data

Names, employers, contact details: anyone identifiable.

Account & case numbers

Anything that maps back to a specific record.

Exact financial figures

Real balances, amounts and dates. Round them or describe them instead.

Credentials & internal info

Logins, API keys, and anything not yet public.

If you wouldn't post it on the company intranet, don't paste it into an AI chat tool.

Take out the who. Keep the what.

NEVER PASTE THIS

Client: Jane Doe, Acme Holdings Ltd

Account: 88-4471-02

Amount: EUR 41,220, due 14 Mar

Login: j.doe / ••••••••

SHARE THIS INSTEAD

"A client's payment of roughly EUR 40k is 2 weeks overdue. What's a firm but professional follow-up email?"

Once it's sent, it can't be pulled back. The problem stays in; the names and numbers come out.

Why AI makes things up

No inside view

It can't see your company's systems, only what you tell it.

A cutoff date

A new regulation or policy update might not be in there yet.

Fluent, not careful

It sounds just as sure when it's guessing as when it's right.

Too agreeable

Push back and it often agrees with you, which doesn't make you right.

One prompt that helps

"Always tell me where this comes from. If you don't have a real source, or you're not sure, say so instead of guessing."

Then check anything factual before you rely on it.

Who owns what AI writes?

Courts have been ruling that purely AI-written work isn't protected by copyright, only the parts where a person made the creative choices.

Edit it, don't just copy it

Real changes and choices make it yours.

Keep a record

Note what was AI-drafted and what you changed.

Don't publish it as-is

Not under your company's name, if it matters.

When unsure, ask

Check your company's AI policy or legal team.

Before you automate: is AI in the loop?

No AI step

A scheduled export or a rules engine moving data around. Your normal build, test and sign-off process applies.

AI is one of the steps

If any step reads, summarises, decides or drafts with an AI model, the account rules apply. Test it on made-up data first.

Explore the data

Which countries, company sizes and sectors use AI the most? An interactive dashboard built on Eurostat and European Commission data.
